KEEPING YOU INFORMED OF PRODUCT CHANGES

To: All Customers, Sales Representatives and Distributors

Date: April 20, 2021

Subject: Updating the eMMC Flash and Operating System on the 3D2104-100, 3D70-100 and 3D50-100 CANbus Displays

Reason

The eMMC flash chip on the 3D2104, 3D70 and 3D50 (-100 and derivatives) is obsolete and has become difficult and expensive to source. To combat the resulting cost increases and limited availability, Grayhill will begin shipping parts with a newer eMMC chip in July of this year. To support the newer chip, the bootloader and kernel require updating on some part numbers. To limit the scope of this change, this update will incorporate a revised version of the current 3.0.35 Linux kernel. If you're interested in upgrading to the 4.1.15 Linux kernel, please order part numbers with a "-200" suffix in place of the "-100" suffix in Table 1 below. ***Please forward this notification to the appropriate person(s) in your organization.***

Description of Change

The display part numbers listed in Table 1 will incorporate the revised Linux OS 3.0.35, revised bootloader and the newer eMMC flash chip.
